

The CK10 series by HALO. Simple maintenance, highly adaptable, and impressive flow rates. Ideal for most homes or light commercial applications. CK10 series systems include a high flow bypass and 1” plastic elbow plumbing connectors.

CK10

MODEL #	MINERAL TANK SIZE	RESIN SQ FT	BRINE TANK	PEAK GPM
H-CK10-150	10" x 54"	1.5	18" x 33"	14
H-CK10-200	12" x 52"	2	18" x 33"	16
H-CK10-250	13" x 54"	2.5	18" x 40"	18

Note: Pellets or granular salt will both work with the CK10 Softener. Pellet salt is preferred.

How it works:

The mineral deposits cling to the resin and the now-softened water exits the softener tank and flows throughout the house. During regeneration, salty water from the brine tank flows up the fill tube and into the softener tank. A rinse cycle commences and the salty water washes the mineral deposits off the resin beads.
